This title in the Rapid Diagnosis in Ophthalmology Series presents a wealth of full-color images - along with differential diagnoses - in side-by-side page layouts to assist you in identifying a full range of retinal disorders. A templated format expedites access to the guidance you need to diagnose the most common retinal conditions - from simple to complex - encountered in practice. Coverage of cutting-edge topics including lucentis therapy for wet ARMD, Avastin therapy for macular disease, and guidance on OCT imaging, help you keep your knowledge up to date. Hundreds of full-color images present conditions as they present in real life.

Common diagnostic pitfalls discuss what to look out for when making a difficult diagnosis. A templated, color-coded layout and differential diagnosis boxes for each condition help you make quick, accurate clinical decisions. A focus on the most common conditions encountered in practice allows you to efficiently formulate treatment plans and referrals. SERIES EDITORS: Jay S. Duker, MD, Director, New England Eye Center, Vitreoretinal Diseases and Surgery Service; Director, Pediatric Retinal Referral Center, Uveitis & Immunology Service; Professor and Chair of Ophthalmology, Tufts University School of Medicine, Boston, MA and Marian S. Macsai, MD, Chief, Division of Ophthalmology, Evanston Northwestern Healthcare; Professor and Vice-Chair of the Department of Ophthalmology, Feinberg School of Medicine, Northwestern University, MI

The editors of this book have compiled a major publication on the recent advances in ophthalmology. In the last decade the science of ophthalmology has made rapid strides - cataract surgery has improved with the development of new ultra small incision techniques, microphaco and the use of lasers, corneal and lens based refractive surgery now offers patients a range of treatments, and ophthalmic surgery itself is now elective in most cases. This major work provides 88 articles by internationally known contributors giving fully up-to-date information on developments within the diverse disciplines of ophthalmology. This book should be on the shelf of every major medical library and in

the possession of every practising ophthalmologist. NB. It also contains a posthumous tribute to Dr. C. D. Kelman, the father of phacoemulsification.

Although uncommon, the occurrence of cataracts in very young patients can result in significant impairment—and can lead to blindness. This practical guide delivers need-to-know information to help clinicians treat pediatric patients with cataracts with a range of therapies and essential guidance on the management of complications. Explore the only reference devoted exclusively to pediatric cataract management!

- 13 new chapters highlight the latest advances in bilateral cataract surgery, intraocular heparin treatment, treatment of traumatic cataracts, pre- and postoperative management, and techniques appropriate for patients in developing nations.
- 4 hours of online procedural video accompany the text—giving readers a clinician's view of essential procedures. A great way to refine technique, improve outcomes, avoid pitfalls, and manage potential complications.
- Quick-reference format helps readers locate vital information at a glance.

One of the founders of the cyberpunk genre of science fiction and a writer of what he calls "transrealist" fiction chronicles his life, describing his struggles to publish his early novels, his work as a professor of mathematics, and his life within the counterculture.

Adequate blood supply to the eye is an important prerequisite for normal visual function. Over the past 40 years our knowledge of ocular blood flow regulation has improved significantly. This reader-friendly textbook provides a comprehensive overview of the current knowledge of ocular blood flow. Lavishly illustrated, it evaluates the wide array of methods that

have been used to measure ocular blood flow. Furthermore, it not only offers the reader an evidence-based summary of the physiological and pharmacological properties of ocular blood flow regulation, but also demonstrates the ocular blood flow abnormalities in different vascular diseases. This book will enhance the understanding of all who are interested in learning more about ocular blood flow in health and disease.

Oftalmología, 2a ed., es una obra elemental de consulta para la atención de los principales problemas oftalmológicos, está dirigida al estudiante de medicina, médico en ejercicio, optometrista y especialista. Los conceptos clínicos, diagnósticos, terapéuticos, así como las herramientas digitales que se incluyen en esta obra, consiguen una mejor asimilación y aprendizaje de las distintas técnicas de abordaje de las patologías oftalmológicas más frecuentes. Esta nueva edición se compone de 22 capítulos, los cuales conservan la misma organización estratégica de la edición anterior. Contiene un nuevo capítulo llamado Tecnologías diagnósticas modernas en oftalmología, en el cual se muestra las nuevas conductas terapéuticas como: biometría-queratometría, aberrometría, tomografía de coherencia óptica, autofluorescencia, entre otros; lo que permite al lector introducirse desde los conceptos básicos, anatómicos y fisiológicos, hasta

los abordajes más especializados.

Veterinary Ocular Pathology: A Comparative Review links the clinical features of ocular disease with gross and microscopic pathology to demonstrate the essential features observable during diagnosis. It is designed to be kept next to the microscope as an invaluable guide to accurate diagnosis in ocular pathology. The book presents a wide range of images of the highest quality. A unique and distinctive feature is the juxtaposition of clinical and pathological images while offering detailed enumeration of the diagnostic features. Expert comparative comments by Dr Daniel Albert and contextual information on relative incidence are provided throughout. The authors address spontaneous disease of the eye in all animal species, with a particular emphasis on companion species. In addition, specific, common or interesting conditions of exotic species are included. A convenient, comprehensive and easy-to-use reference for veterinary pathologists, veterinary ophthalmologists, students and comparative vision scientists. The first text devoted to the pathology of spontaneous diseases of the eyes and periocular tissues of domestic animal species Exceptionally high quality illustrations are presented throughout, demonstrating clinical features, gross pathology and histopathology Written by pathologists and clinicians Includes a chapter devoted to the pathology of conditions associated with glaucoma in domestic animals

This book aims to assist ophthalmologists in providing the best possible care for children with congenital cataracts. The entire patient pathway is covered, from preoperative assessment through application of the various surgical techniques to postoperative care and management of complications. Among the topics discussed are new developments in molecular genetics relevant to patient evaluation, intraocular lens power formulas, and the findings of the Infant Aphakia Treatment Study. The surgical section describes anterior capsulotomy, lensectomy, selection of intraocular lens (IOL) power, IOL implantation in the capsular bag, posterior capsulotomy techniques, the use of secondary IOLs and iris-fixated IOLs in children, and surgical management in developing countries. Visual outcomes after surgery are also fully addressed, with chapters on the occurrence of strabismus, nystagmus, and poor stereopsis.

This Oxford Specialist Handbook is a concise, practical yet comprehensive guide to ophthalmic anaesthesia, covering anatomy, specific anaesthetic techniques and principles, and recent changes in the field.

During the second half of the twentieth century, economics exported its logic - utility maximization - to the analysis of several human activities or realities: a tendency that has been called "economic imperialism". This book explores the concept termed by John Davis as "reverse imperialism", whereby economics has been seen in recent years to have taken in elements from other disciplines. Economics and Other Disciplines sheds light on the current state and possible future development of economics by focusing on it from a philosophical perspective, broadening the concept of

rationality in economic theory. The beliefs that prevail in the world today make up a physicalist worldview. This book argues that this pervasive view is harmful for economics as a social science. Do new economic currents like behavioral economics, evolutionary economics, neuroeconomics, institutional economics, happiness economics, the capability approach and civil economy, escape this widespread mentality? What would be an adequate underlying economic ethos? Do these approaches fit into this ethos? Ricardo F. Crespo appraises the contributions from a classical philosophy angle, emphasizing their implications regarding practical reason. This volume is of great importance to those who are interested in political economy, economic theory and philosophy, as well as philosophy of social science.
