SAPIENS BOOK SUMMARY BY FLASHBOOKS

Paul Shapiro gives you a front-row seat for the wild story of the race to create and commercialize cleaner, safer, sustainable meat—real meat—without the animals. From the entrepreneurial visionaries to the scientists' workshops to the big business boardrooms—Shapiro details that quest for clean meat and other animal products and examines the debate raging around it. Since the dawn of *Homo sapiens* some quarter million years ago, animals have satiated our species' desire for meat. But with a growing global population and demand for meat, eggs, dairy, leather, and more, raising such massive numbers of farm animals is woefully inefficient and takes an enormous toll on the planet, public health, and certainly the animals themselves. But what if we could have our meat and eat it, too? The next great scientific revolution is underway—discovering new ways to create enough food for the world's ever-growing, ever-hungry population. Enter clean meat—real, actual meat grown (or brewed!) from animal cells—as well as other clean foods that ditch animal cells altogether and are simply built from the molecule up. Also called lab-grown meat, cultured meat, or cell-based meat, this race promises promise to bring about another domestication. Whereas our ancestors domesticated wild animals into livestock, today we're beginning to domesticate their cells, leaving the animals out of the equation. From one single cell of a cow, you could feed an entire village. And the story of this coming “second domestication” is anything but tame.

21 Lessons for the 21st Century While author Yuval Noah Harari focused on the past and the future in his previously bestselling books, his latest release, 21 Lessons for the 21st Century, addresses the urgent issues the world currently faced with, and the radical changes that await us in the immediate future. Harari focuses the first half of his book covering large swaths of political and technological advances and issues that have arisen out of the past and emphasizes our dire need to change their status quo in order to adapt to what awaits us just around the corner. Harari focuses particularly on the looming impacts of InfoTech and biotech, noting that neither today's widely adopted liberal worldview, nor the greater democratic system, are structured in such a way to be able to manage and maintain any control over imminent technological advances. Sapiens: A Graphic History, Volume 2

The ebook is designed to be read on devices with large color displays. The Kindle edition is incompatible with iOS. See below for a list of supported devices. This second volume of *Sapiens: A Graphic History*, the full-color graphic adaptation of Yuval Noah Harari's #1 New York Times bestseller, focuses on the Agricultural Revolution—when humans fell into a trap we've yet to escape: working harder and harder with diminishing returns. What if humanity's major woes—war, plague, famine and inequality—originated 12,000 years ago, when *Homo sapiens* converted from nomads to settlers, in pursuit of the fantasy of productivity and efficiency? What if by seeking to control plants and animals, humans ended up being controlled by kings, priests, and Kafkaesque bureaucracy? Volume 2 of *Sapiens: A Graphic History – The Pillars of Civilization* explores a crucial chapter in human development: the Agricultural Revolution. This is the story of how wheat took over the world; how an unlikely marriage between a god and a bureaucrat created the first empires; and how war, plague, famine, and inequality became an intractable feature of the human condition. But it's not all doom and gloom with this book's cast of entertaining

characters and colorful humorous scenes. Yuval, Zoe, Prof. Saraswati, Cindy and Bill (now farmers), Detective Lopez, and Dr. Fiction, all introduced in Volume 1, once again travel the length and breadth of human history, this time investigating the impact the Agricultural Revolution has had on our species. The cunning Mephisto shows them how to ensnare humans, King Hammurabi lays down the law, and Confucius explains harmonious society. The origins of modern farming are introduced through Elizabethan tragedy; the changing fortunes of domesticated plants and animals are tracked in the columns of the Daily Business News; the story of urbanization is portrayed as a travel brochure, offering discount journeys to ancient Babylon and China; and the history of inequality unfolds in a superhero detective story; with guest appearances by historical and cultural personalities throughout such as Thomas Jefferson, Scarlett O'Hara, Margaret Thatcher, and John Lennon. *Sapiens: A Graphic History, Volume 2* is a radical, witty and colorful retelling of the story of humankind for adults and young adults, and can be read on its own or in sequence with Volume 1.

ABOUT THE ORIGINAL BOOK: "Sapiens" presents a pleasant and simple narrative about the extraordinary story of the evolution of mankind. In this work, it shows a detailed vision that everything we learn in school about history doesn't teach us anything about how our species spread throughout the world. How big cities and empires occurred, what made us believe in Gods, why did money arise? From that curious and interesting past, we are also presented with a projection into the future, towards the millenniums to come. It is a well narrated chronical of life. From the first humans that inhabited the earth, all the way to the considerable progress like the great cognitive, agricultural and scientific revolutions. This work has drawn interest from universities and the public. Making the young writer an international celebrity. Sapiens: A Brief History of Humankind by Yuval Noah Harari (Book Summary) Important note: This is not the original book.

This is a book summary of Sapiens: A Brief History of Humankind by Yuval Noah Harari About: Our species, Homo sapiens, started as just another, biologically insignificant, animal among countless others, but at some point made a very quick "jump" to domination over other species that has left man anxious, destructive, and often miserable despite all our efforts to be happy. Yuval Noah Harari's book, 'Sapiens, ' traces the origins, mechanisms, and effects of what we think of as "human progress" from small bands of hunter-gatherers 100,000 years ago to the present-day global network through which our species has come to dominate the entire Earth. This bird's-eye view of human history delves into the development of sapiens' social organization and the structural features of human cultures through which our species has spread, replicated, and evolved, including the breakthroughs of human language with its infinite expressions, the use of the human imagination, and the rise of the concept of a better future that lies just beyond the horizon. Through these mechanisms, our species has evolved socially, rather than biologically, into a species that's increasingly in control of our own destiny. This book considers not only how this evolution has occurred but questions of whether this "progress" has truly been beneficial and how we might, with our awareness of how we got here, decide where we want to go. Here's what you'll learn about in this summary: Although sapiens have not evolved biologically in 100,000 years, we have experienced radical evolutions in the social order driven by our ability to collectively imagine. History, overall, is moving in the direction of global unity of humankind. None of the outcomes of history have been

inevitable, and the flexible nature of the social order may mean that our species can control its destiny. Book Summary of Sapiens: A Brief History of Humankind by Yuval Noah Harari Summary by Dean's Library

For millennia, war was viewed as a supreme test. In the period 1750-1850 war became much more than a test: it became a secular revelation. This new understanding of war as revelation completely transformed Western war culture, revolutionizing politics, the personal experience of war, the status of common soldiers, and the tenets of military theory.

NEW YORK TIMES BESTSELLER Yuval Noah Harari, author of the critically-acclaimed New York Times bestseller and international phenomenon *Sapiens*, returns with an equally original, compelling, and provocative book, turning his focus toward humanity's future, and our quest to upgrade humans into gods. Over the past century humankind has managed to do the impossible and rein in famine, plague, and war. This may seem hard to accept, but, as Harari explains in his trademark style—thorough, yet riveting—famine, plague and war have been transformed from incomprehensible and uncontrollable forces of nature into manageable challenges. For the first time ever, more people die from eating too much than from eating too little; more people die from old age than from infectious diseases; and more people commit suicide than are killed by soldiers, terrorists and criminals put together. The average American is a thousand times more likely to die from bingeing at McDonalds than from being blown up by Al Qaeda. What then will replace famine, plague, and war at the top of the human agenda? As the self-made gods of planet earth, what destinies will we set ourselves, and which quests will we undertake? *Homo Deus* explores the projects, dreams and nightmares that will shape the twenty-first century—from overcoming death to creating artificial life. It asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers? This is the next stage of evolution. This is *Homo Deus*. With the same insight and clarity that made *Sapiens* an international hit and a New York Times bestseller, Harari maps out our future.

Summary of Sapiens - A Brief History of Humankind - A Comprehensive

Summary Seventy thousand years ago, there were at least six different human

species on earth. They were insignificant animals whose ecological impact was

less than that of fireflies or jellyfish. Today, there is only one human species left:

Us. Homo sapiens. But we rule this planet. Sapiens, the book, takes us on a

breath-taking ride through our entire human history, from its evolutionary roots to

the age of capitalism and genetic engineering, to uncover why we are the way we

are. Sapiens focuses on key processes that shaped humankind and the world

around it, such as the advent of agriculture, the creation of money, the spread of

religion and the rise of the nation state. Unlike other books of its kind, Sapiens

takes a multi-disciplinary approach that bridges the gaps between history,

biology, philosophy and economics in a way never done before. Furthermore,

taking both the macro and micro view, Sapiens conveys not only what happened

and why, but also how it felt for individuals. Sapiens: A Brief History of

Humankind is a book by Professor Yuval Noah Harari first published in Hebrew in

Israel in 2011, and in English in 2014. Harari cites Jared Diamond's Guns,

Germs, and Steel (1997) as one of the greatest inspirations for the book by

showing that it was possible to "ask very big questions and answer them

scientifically". Here is a Preview of What You Will Get: A Full Book Summary

Homo Deus (2015), Yuval Noah Harari examines new and futuristic approaches

to human evolution and explores what might occur once old myths combine with

superhuman technologies. He also discusses the threats that liberalism will

encounter in the near future and suggests a greater cosmic plan, giving a brief

glimpse of what the future might look like in the light of technology. The techno-

religion of Dataism will ultimately replace traditional religions by creating Homo

deus, a new human entity that will supersede Homo sapiens. Although

humanity's time on Earth has shaped all aspects of life and nature, it is now time

for biology, alongside technology, to decide the future. Harari aims to raise three

key issues about this future: Is life really just data processing? Which is more valuable, intelligence or consciousness? What will happen if our algorithms know us better than we know ourselves?
